Code

The code appears in order of the topology. The topology has been provided below, along with a table of contents for your ease of navigation.

The code is 14,042 lines of JavaScript, HTML, PHP, CSS, and SQL (mysqli).

Our primary goal as developers was to make a system PPC would use and continue to.
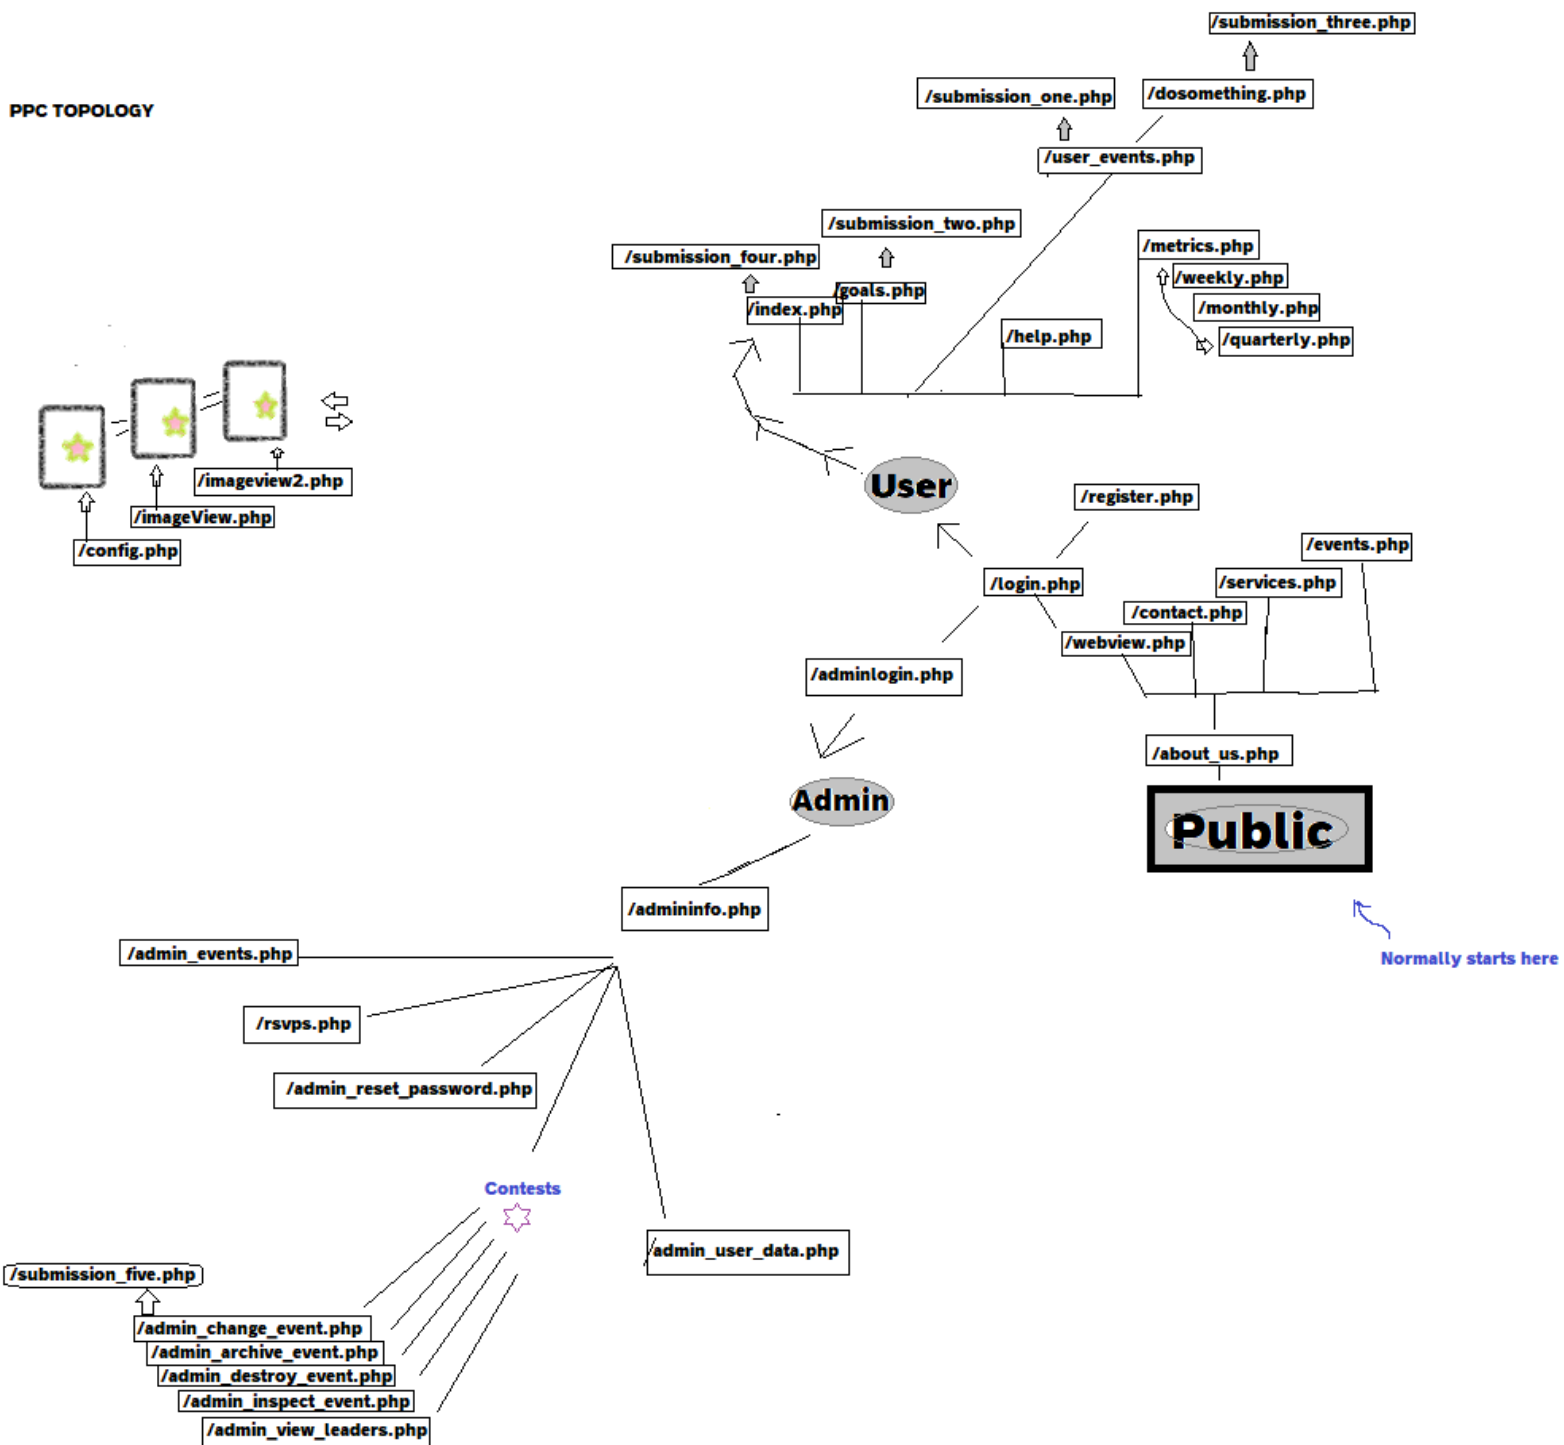

Daniel Crum – Lead Developer   2.12.2021-9.24.2021

John Quinn – Coordinator – Junior Developer

Any agent who wants to increase their performance and produce at a higher level should join coaching today. The uncertainty of how to structure your business, grow your database, build relationships and, most importantly, maximize your profits is not uncommon for Realtors. Thus, the ideal solution is to hire a coach who will guide you in the right direction. Our PPCP Coaches will help stimulate your business and grow you personally and professionally while coaching along side you.

?>
```

```html
<!--- below is some HTML that welcomes the user and names the event based on SQL we have recently acquired

saadly I'm going to let some of my formatting run since I'm switching so much between php and html here and for
different reasons as the docuement progresses!!--->

<div class="blackborder">

<h1><?php if($nameofevent != null){echo "<div class='superTextBigWhite'>The current contest is: ", $nameofevent
,"</div>";}else{echo "It appears there is not a contest going on at the moment";} ?></h1>

</div>

<!--- the above code shows the name of the event and then the image associated,

using our referenced imageView.php encoder file for images (much like the

config.php file for database connection)--->

<!--- now begins some tricky code, here we are creating an html form, and interweaving

php code to display the proper variable names only if they aren't null; we are also assuming

it is impossible the admin would create an event with less than 4 variables, this means

we will create a checkbox only for variables that actually exist using if statements and more--->

<!--- the below php code is where we use a foreach loop to create each form checkbox

and the proper name with it (and some other properties besides name) --->
```

```php
<?php
include "config.php";
$sql2 = "SELECT eventID FROM `events` WHERE CURRENT_DATE BETWEEN startdate AND enddate";
$result2 = mysqli_query($con, $sql2);

require "config.php";
while($row = mysqli_fetch_array($result2)) {
        ?>
```

```html
            <div class="blackborder80" >
                  <img src="imageView.php?imageID=<?php echo $row["eventID"]; ?>" class="imageStyle" /><br/>
                  </div>
```

```php
<?php
mysqli_close($con);}
?>
<?php
//All of this is experimental. {will just comment out. It is a countdown to when the event ends}.
//echo "<br></br>";
```

```php

code defragmentation for this iteration (2) (date is9.15.2021 (2.?.2021 -> 9.15.2021)

    I daniel c e crum as the lead developer have put together almost everything here ( I mean the code).

    I for sure didn't do it alone though. John Quinn was immeasurably helpful more than he realizes or can give
himself credit for. He is super smart and can really talk the talk

    with you after you talk to him for a while. He gets the logic behind programming and is also verse in CIS a
nd project management. He is patient, reasonable, and attentive as a partner. A great combination for me. Also
incredibly good at finding stray semicolons.

    In addition: Dr. Sivitanides, Vonda Chambers, Mitch Mangum, Emily Stokes, Robert Gutmann, Bikash Bishwakarm
a, and many others pitched in. We got in a good situation where we could work and it was nice.

    Thank you very much for your opportunities team. */
